

ONE STEP AHEAD

Satisfied guests, a sound environment and long-lasting success – these are all important to us. We want to make continuous improvements to the protection of the environment and nature, safety and quality. We want to make a contribution to ensuring the livelihood of current and future generations. We do, of course, also comply with all legal regulations. We are actively taking part in ECOCAMPING to help us to achieve our goals even better than before.

Together, we want to:

- | | | | |
|---|--|---|---|
|  | Inform and involve guests, employees, partners and the general public about our commitment |  | Avoid waste and optimize the cycle of materials |
|  | Use energy efficiently |  | Design the campsite in an ecologically sound manner and promote species diversity |
|  | Promote sustainable and ecologically sound energy production |  | Consider the nature and the environment in our leisure activities |
|  | Keep air clean |  | Promote soft mobility |
|  | Avoid damaging ground and waters |  | Favour products and services locally sourced |
|  | Use water sparingly |  | Clean in an environmentally friendly manner and avoid hazardous substances |
